

Downwinders

reducing toxic air pollution in north texas *at risk*

Applicant Information Form The Pope North Texas Pollution Reduction Program

Organization:			Evergreen Farms Inc.		
Organization type			Green Enterprise & Rescue Mission		
Organization Street Address:			5795 Edgefield Ln. P.O. Box 66		
City, State, Zip			Midlothian, Tx. 76065		
Project Officer (Title, First, MI, Last, Suffix):			Founder, R. Fred Howard		
Phone— extension	214-236-5640	Fax		Email	fredsbeds@sbcglobal.net
Project Name		Evergreen Farms – Midlothian			
Location of Project		5795 Edgefield Ln.			
Project Start Date (MM/DD/YYYY)		Subject to Funding			
Project End Date (MM/DD/YYYY)		12 months from Start Date			

BUDGET: Please summarize your budget request in the space provided. You should also provide a more detailed budget in your preproposal.

Line Item	Requested Funds	Matching Funds
Salaries and Benefits	90,500	Very Possible
Equipment (Corporate)	59,000	Very Possible
Other: (Project Direct)	100,5000	Very Possible
Total:	250,000	Very Possible

Use this Page to Provide Us With Additional Information:

Preproposals shall be no longer than five pages, and should include a description of the activities for which the applicant requests funding, the deliverables and environmental results, a detailed budget, and project timeline. Applicants should specifically address the two review criteria and identify the project activities that will address each of these criteria. All preproposals should also include the applicant information form (attached to this program announcement).

Please provide us with additional information regarding the project

**Note: Evergreen may be able to offer a perpetual source of funding to support your Agenda.
Let's talk. Fred**

evergreen farms Inc.

Funding Request

4.24.09

Dear "Down Winders",

We share common goals and objectives i.e. to monitor, identify, and prevent abuses to our environment and related life forms, then reclaim, restore, encourage, and/or enforce good Stewardship for our planet, everywhere. Your Focus is North Texas while Evergreen is more national and even global in scope while being locally implemented.

Evergreen is a cooperative of Enterprise and Mission. Our two primary enterprises are; Hydroponic Farming of vegetables and fruit (commercial) and Renewable Energy Generation from biomass conversion (municipal, agricultural, and Industrial). We also purify water in the process. Our Mission Components are the rescue of "At Risk Kids" and joint ventures in Mission Enterprise with local community & church groups to fund a common Mission, Youth Rescue, be it here or in third world countries.

A standard E-Farm will be comprised of 12 Growing Ranges (18 acres of Green Houses), a 3 mW Green Power Plant(Gpp) processing up to 50 Tons of biowaste a day, support facilities for the above and to house Mission Enterprise. It will also facilitate (permanently house) some 30 rescue Youth and their surrogate parents. Price tag; \$35 Million.

Our Purpose is "Faith Based" (Origin 1988) while our growth and sustainability is "Free Enterprise" based. We are "Green" and nonpolluting in every aspect, we even qualify for "Carbon Credits" at the end of the day. Once fully operational, Evergreen becomes totally self sustaining and will employe some 200 full time workers.

Our Technology is proven, needs we address are well known, and our strategy ready to implement. We need \$250,000 Venture Capital to move beyond the R & D Phase to our first Project Implementation (see Budget). Project funding (\$35 Mil.) is available and pending subject to us getting our Corp. house in order. As you will see and can imagine, there is considerable Legal, planning, administrative, accounting, marketing, personnel, and management systems to put in place not to mention Real Estate procurement, land planning, engineering, permits, vendor/supplier contracts, competitive bidding, etc. that must take place to start development and construction of an Evergreen Farm in any selected market.

We have targeted Real Estate, 85 acres, mostly in Ellis County, all in Congressman Joe Barton's Dist. for our first of twelve Farms needed for the DFW Population Base (24 ac. Hydro farm per half million pop.) Long Term, our target is the 30 Major Metro Areas of the USA. Each E-Farm will be part of the Evergreen Network but financially independent and naturally sustainable.

Thanks for considering our request,

R. Fred Howard, Evergreen Farms 214-236-5640

"As long as there are people, a need for food & water, hence waste, Renewable Energy".

Our Logo: "We're outside the "Box" on this one" but forever "Green".

evergreen farms Inc.

Overview

Evergreen consist of *Four Cornerstones* for success. Each accomplishes a specific Mission while supporting a common cause i.e. "Rescue of At Risk Kids". The other three components are excellent investment vehicles as stand alone Business Ventures, however, their synergism creates a naturally sustainable, increasingly profitable, and easily duplicated venture that satisfies basic humanitarian needs in every community while funding the rescue Mission. Evergreen is uniquely positioned where few will follow because of our mix of Free Enterprise with a Faith Base concern for Humanitarian and Environmental issues. As our Logo suggest, we're way outside the box, however, our box is "Green", inside and out, and positioned to become very *profitable* *. The more successful our Enterprise the more effective our Mission.

- **C.H.O.S.E.N.rescue** (non profit Mission)

A reentry program aimed toward low-to-moderate income adolescents recently incarcerated or homeless. They will be housed in a safe, secure environment where education, rehabilitation, and skill training will be provided. Ongoing workshops will be conducted for a variety of jobs needed to support various maintenance, construction, and development projects both in-house and outside the Evergreen Farms environment.

Our young residents will live in energy efficient housing, which are constructed at comparable cost to conventional housing but cost much less to operate and maintain. Young couples and Adult Mentors will provide daily supervision and instruction to guide and prepare each youth for life's journey. We call it Evergreen Farms, they call it home.

- **Renewable Energy** (Resource Regeneration Inc.)

For most, this opportunity will be about Return On Investment (ROI) or the money to be made converting biomass (Municipal Waste) into electricity. As you will see, we have technology that can do that very efficiently as needed i.e. 1.5 mW from processing 24 Tons of biomass per day, however, with proper funding we can custom design systems to meet any requirement.

Our "Renewable Energy" sister company, *Resource Regeneration Inc.*, has developed technology to:

- **Convert any and all biomass into electricity, very efficiently and pollution free.**
- **Maximize profitability to allow ongoing R&D to push the envelope of biomass conversion technology and to provide attractive returns on investment.**
- **Help propel North America into an age of Energy Independence from foreign oil.**
- **Advance the Evergreen Mission to gain public support and participation from those who stand to benefit the most i.e. humanity.**

With adequate funding, we can revolutionize Waste Reclamation and soon be a leader in Municipal Waste Conversion in North America.

• **Hydroponic Farming** (Salad Acres LLC)

As our world's natural resources literally dry up or are used up while Global populations increase beyond man's ability to support them and our civilization slips into chaos as it clambers for survival, where will our food and clean water come from? Recent studies show that about 70% of the price you pay for groceries at your local Super Market is transportation cost to get it there. Did you know Internal combustion engines using Fossil Fuels rich in hydrocarbons are the greatest contributors to air pollution in the world and we condone their use because we like to eat, besides what are the alternatives? If I have your attention, please consider:

Our "Better than Organic" sister company, *Salad Acres Inc.* has advanced and/or enhanced thousand year old Hydroponic Growing technology (water/root interface), to produce a safe, secure, and reliable food source for feeding the masses. With the ability to grow and harvest super enriched crops, year round, in any environment, we can feed half a million people from a 20 acre Hydroponic Green House. We label it "better than organic" because we control the 52 elements and nutrients that go into the growing process, regulate and control the growing environment, and monitor each crop to assure optimum "vine ripening" for harvest and delivery of Fresh Produce to nearby Markets.

In essence, your Local Evergreen Farm becomes your perpetual Farmers Market offering any mix of fresh vegetables and fruits at substantial savings in cost and environmental impact. One tenth the water is used to grow produce hydroponically than by irrigated dirt farming while annual yield per acre is 8 to 10 times that of conventional growers. You will be able to visit the farm to select your produce or you can buy from any local Grocer who chooses to become an Evergreen Farm Affiliate. Being within miles of your community, we transport at a fraction of the cost with significant reductions in CO₂ emissions.

• **Evergreen Mission Partners** (JV Enterprise)

Every community served by an Evergreen Farm has "under served needs". The "O" in CHOSENrescue is for *Opportunity* to meet those needs. As a joint venture with the local church community, Evergreen will identify and propose long term solutions to meeting these needs. Coop. Enterprise may be established to involve youth and adults, paid and volunteer, Corp. and Church(s), Municipal and private, all working together to meet these needs and advance the quality of life in that community.

Ten critical factors needed to sustain life when our world faces Crises be it Man Made, Natural, Governmental, or other. Evergreen addresses all ten:

- Food: Continuous growing of Hydroponic Organic vegetables
- Water: Conservation, Reclamation, and purification
- Energy: Renewable: biomass conversion and Bio Fuel production
- Shelter: High energy efficient Monolithic Domes and other conventional structures
- Medical: Homeopathic Medicine and Healthy Diets
- Jobs: Admin., production, distribution, mfg., marketing/sales, R&D, etc.
- Communications: Bio Fuels to run Electric Generators to power Transmitters
- Hope: Belief in self, humankind, and God's plan for us
- Leadership: Natural selection from ranks of those seeking a better life.
- Faith: Trust in God thus freedom from fear and anxiety

By being part of Evergreen Farms (in or out of the box), we use your talents and training to create, make, and market products and/or services for the benefit of mankind.

"Team Evergreen" offers opportunity for individuals to become involved in Evergreen Farms as a member, mentor, contributor, volunteer, or paid employee. Join our **125K.10.12 Club** to help create a "Sister Evergreen Farm" in some Third World Country.

Current Mission Enterprise Partners:

- Evergreen Wood Products www.beddingfactory.com (wood shop)
- Evergreen Properties (Buy.Fix.Hold. Properties)
- Evergreen "Lawnsapes" (Yard Maintenance and LawnScapes)

Bottom Line - Evergreen Farms will produce renewable energy, reduce waste, feed the masses, and rehabilitate, educate, and train "at risk" youth who need a "Break" in life. A team of key personnel necessary to make this project work will be assembled for each Farm to give of their time, effort, know-how, and compassion to make "Evergreen Farms" an "Eco-Friendly" and financially viable enterprise for each community it partners with. Economic impact to each community will be directly proportional to the size of it's operations, number of jobs created, and size of Market served.

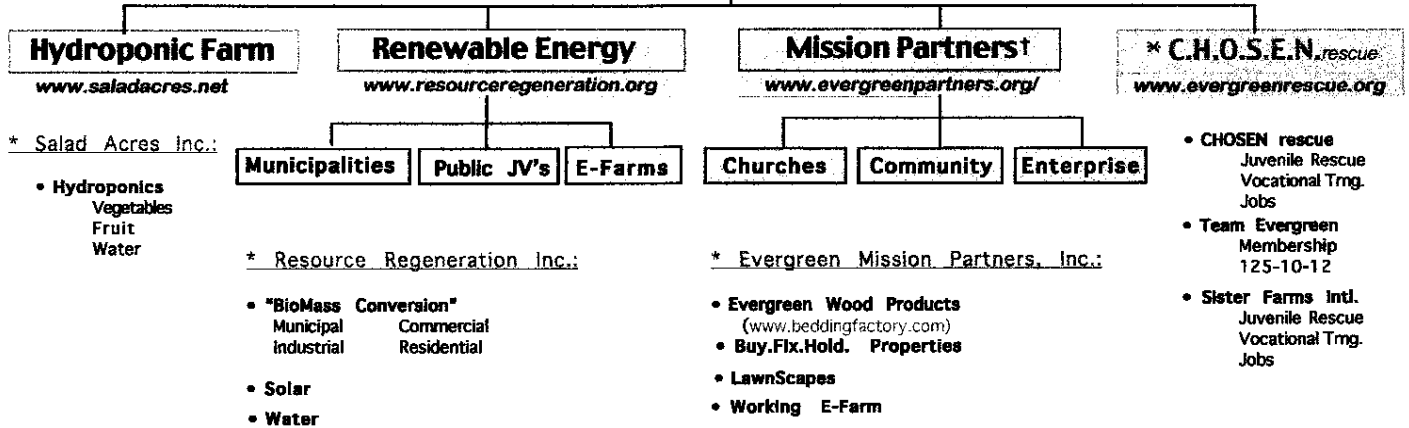

* Profits will be derived from three Levels of "For Profit" Enterprise by design to provide Perpetual support for and Growth of the Rescue Mission. Sister E-Farms will be less capable of generating profitable income, therefore, if they accomplish the Mission as "Break Even" operations, they will be considered successful. Each will have their Domestic E-Farm counterpart to subsidise if need be.
